# Objectifs

---

Understanding the phosphorus cycle and its impact in nature.

# Introduction

---

## SUMMARY

### 1. Introduction

1. Why do we talk about phosphorus ?
2. How was phosphorus discovered?
3. What is phosphorus ?
4. Where is phosphorus ?
5. Why and how humans use phosphorus ?

### 2. Phosphorus cycle

1. The cycle

### 3. Anthropogenic phosphorus input

1. Why phosphorus became toxic ?
2. Why is it important ?
3. Current phosphorus dependency
4. Prospective of phosphorus demand
5. A new war on phosphorus ?
6. How can we ensure the safety of phosphate supplies?
7. Sustainable management of phosphorus

# 1. Introduction

## 1.1. Why do we talk about phosphorus ?

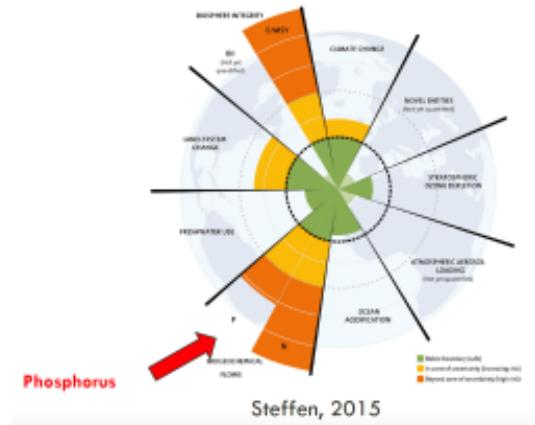

1 of the 9 planetary limits

1 of the 3 planetary limits exceeded

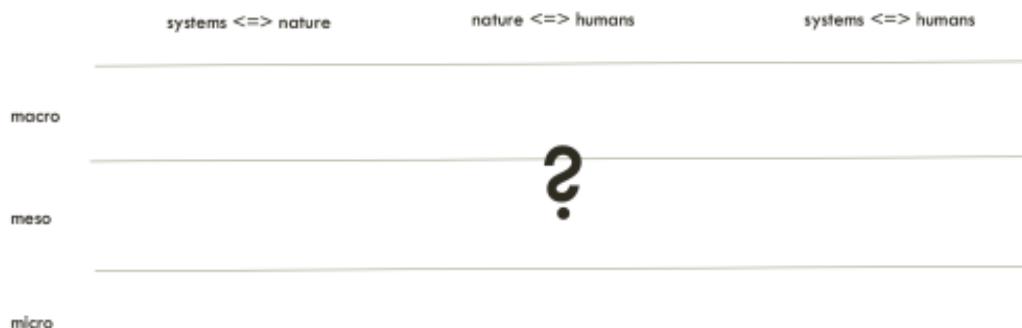

What is phosphorus ?

What is its cycle ?

In which human activities is it used ? How to return to a "normal" situation ?

During the course, think about the different interactions between humans, nature and systems involving phosphorus.

## 1.2. How was phosphorus discovered ?

**According to you, how did humans discovered phosphorus ?**

**A. By looking for the Philosopher's Stone**

B. By doing caving (spéléologie)

C. By observing a carp population in a lake

**A - Complete answer :**

By looking for the Philosopher's Stone AND analyzing urine. Yes.

Who ? Hennig Brand

When ? 1669

Why ? By looking for the Philosopher's Stone

How ? By analyzing large quantities of urine

Properties :

- it is phosphorescent
- it ignites spontaneously on contact with air

1769 : Scheele discovery

(Gervy, 1970)

(Joseph Wright, 1771)

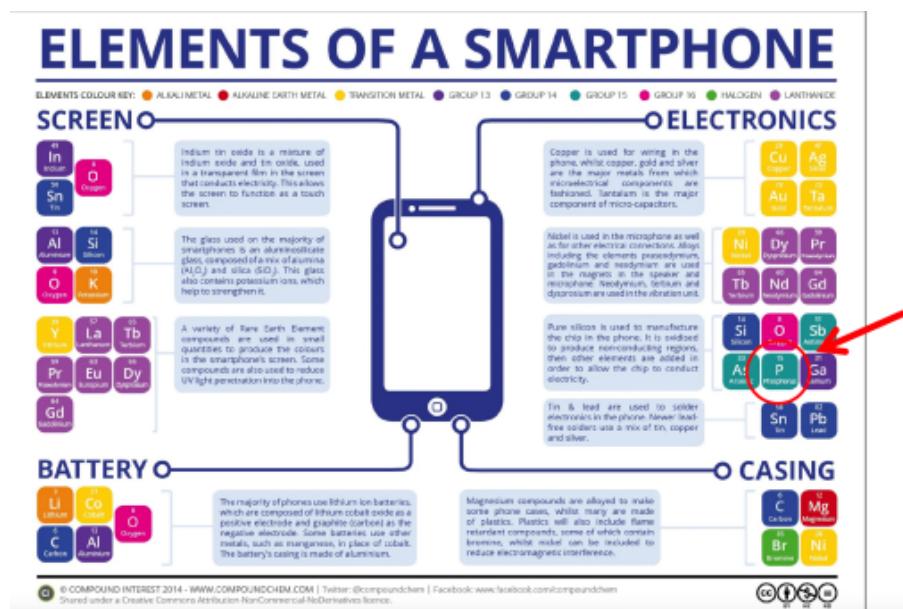

## 1.3. What is phosphorus ?

**According to you, where can we find phosphorus ?**

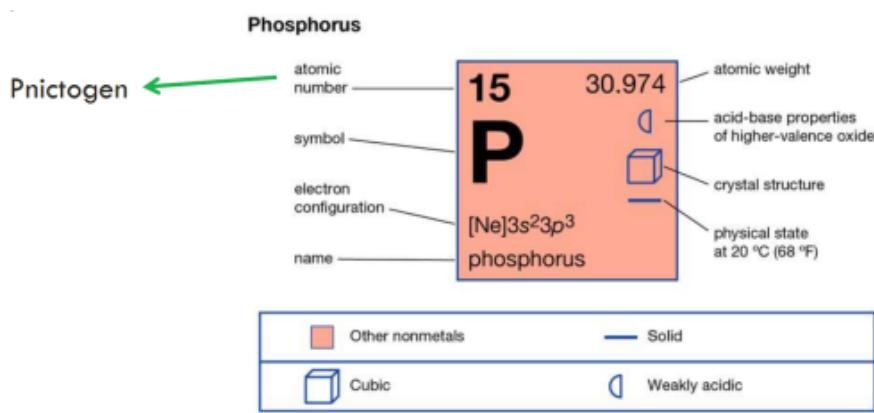

A. In our DNA

B. In our Smartphones

C. In our clothes

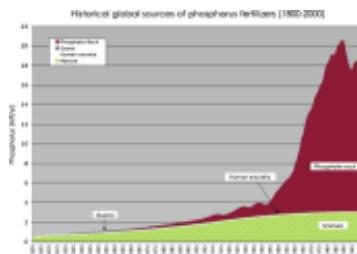

(Compound Interest, 2014)

(Sanderson, 2018)

## 1.4. Where is phosphorus ?

(Cordell, 2009)

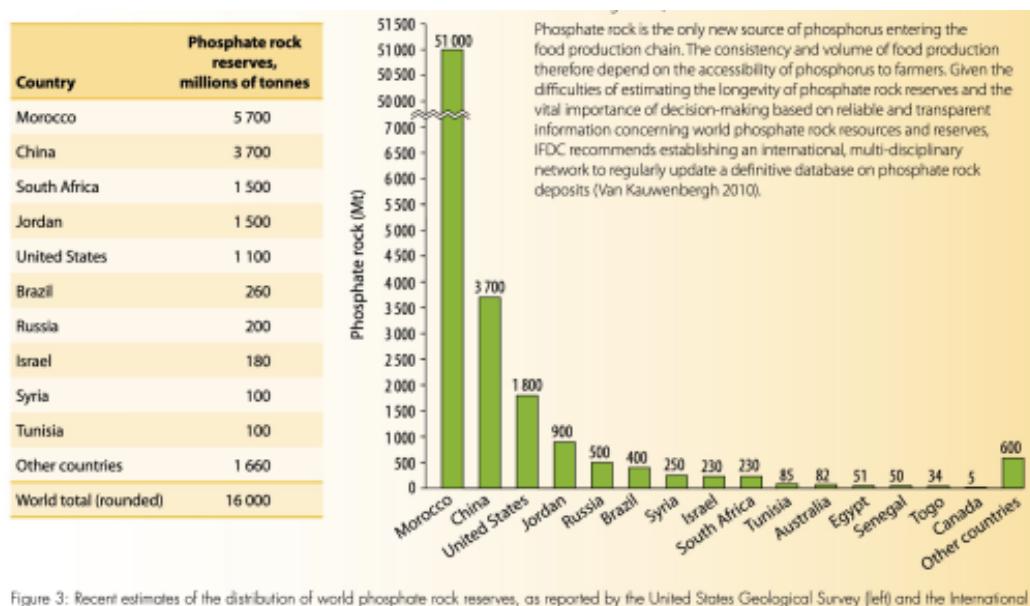

Figure 3: Recent estimates of the distribution of world phosphate rock reserves, as reported by the United States Geological Survey (left) and the International Fertilizer Development Center (right). Most potentially viable phosphate rock reserves are concentrated in a few countries. Sources: Jasinski (2010) and Van Kauwenbergh (2010).

Note: The United States Geological Survey's Mineral Commodity Summaries 2011, published on 21 January 2011, revised the USGS estimate of world phosphate rock reserves to 6.5 billion tonnes. Its revised estimate of Moroccan reserves is 50 billion tonnes, based on information from the Moroccan producer and IFDC. The top ten countries in the 2011 report are Morocco, China (3.700 Mt), Algeria (2.200 Mt), Syria (1.800 Mt), Jordan (1.500 Mt), South Africa (1.500 Mt), the United States (1.400 Mt), Russia (1.300 Mt), Brazil (340 Mt) and Israel (180 Mt). Source: Jasinski (2011).

(Syers, 2011)

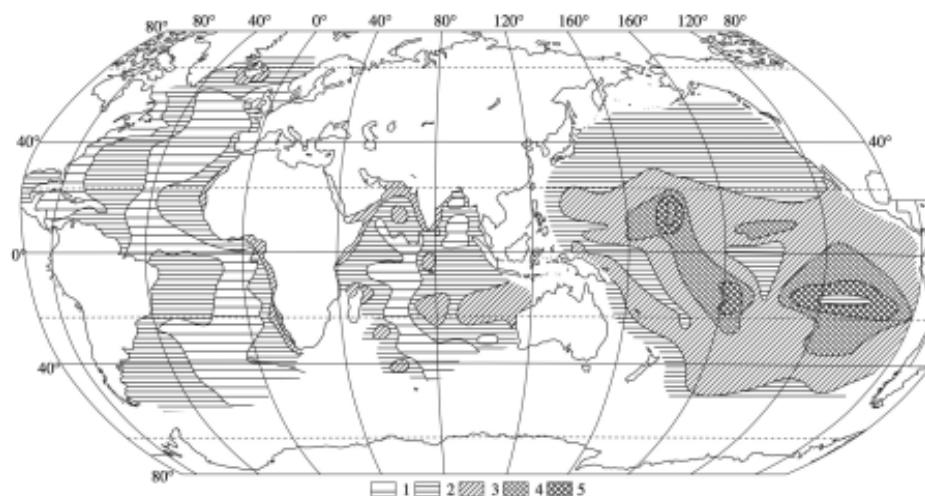

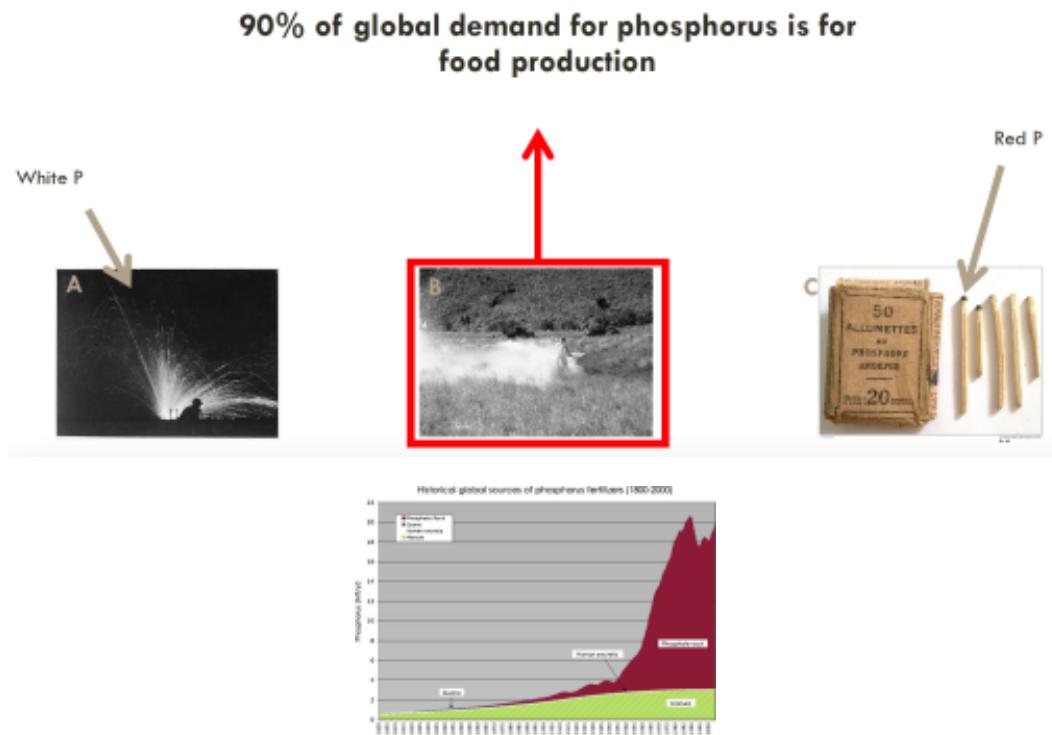

Fig. 1. Phosphorus distribution (%) in the upper sediment layer of the World Ocean, based on data from (Baturin, 1988; Baturin and Sevast'yanova, 1986; Baturin et al., 1995; Emel'yanov and Romankevich, 1979). (1) <0.05%; (2) 0.05–0.1%; (3) 0.1–0.2%; (4) 0.2–0.3%; (5) >0.3% (for the Indian ocean: (2) 0.05–0.08%; (3) >0.08%).

(Baturin, 2003)

## 1.5. Why and how humans use phosphorus ?

**According to you, why do we use phosphorus ?**

- A. To create bombs
- B. To create fertilizers
- C. To create match scrapers (grattoirs pour allumettes)

(Cordell, 2009)

**And HOW ?**

Use of phosphates before their discovery :

1. Use of bones
2. Use of guano

**According to you, what is guano ?**

- A. A plant that can be smoked
- B. A typical Latin American outfit

**C. A pile of excrement**

Seabirds and bats dropping are full of phosphorus !

2 reasons to use guano :

- Both live in large colonies
- High concentration of phosphorus

## 2. Phosphorus cycle

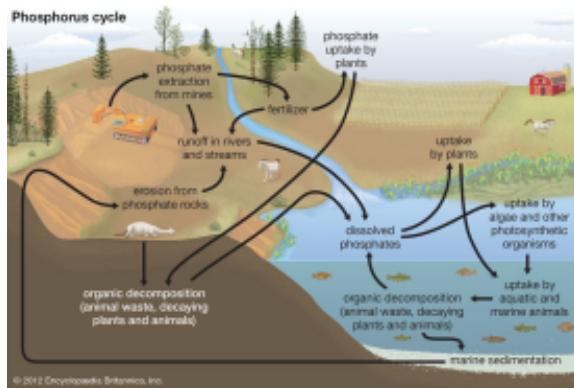

### 2.1. The cycle

According to you, what is not involved in the phosphorus cycle ?

A. Atmosphere

B. Oceans

C. Lacks

### 3. Anthropogenic phosphorus input

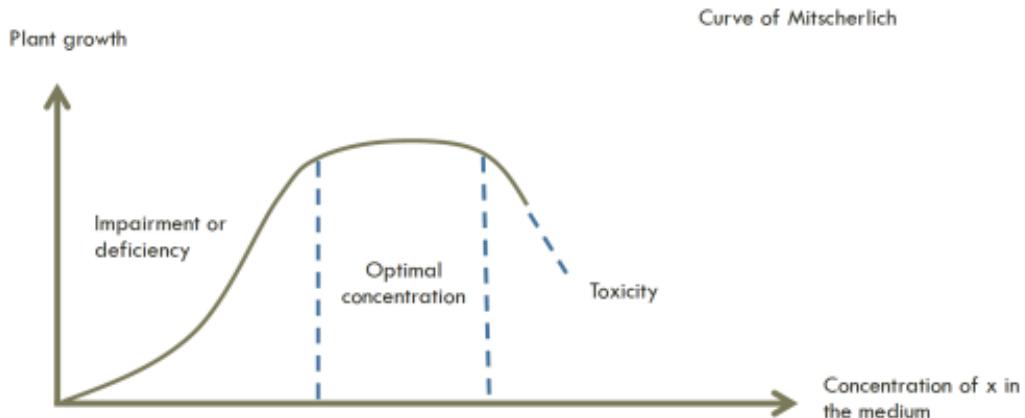

#### 3.1. Why phosphorus became toxic ?

An ever increasing amount of phosphorus in ocean.

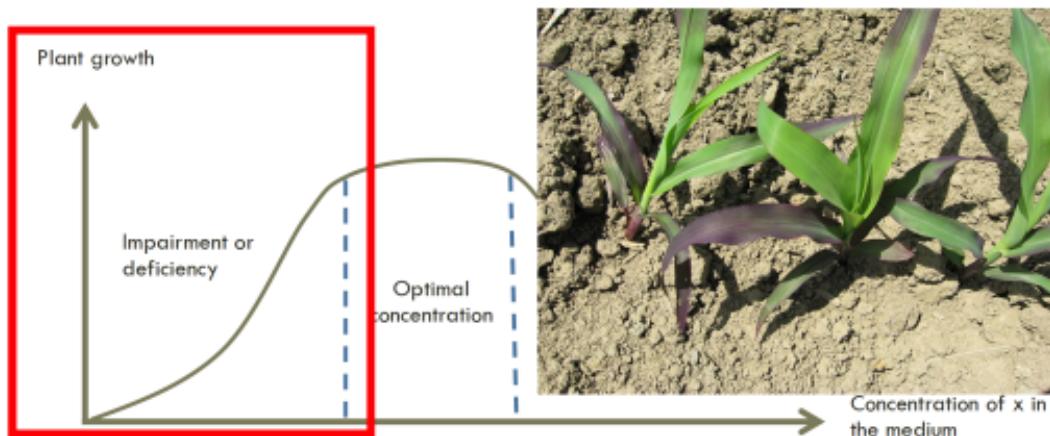

Table 2. Forms of present-day and preanthropogenic phosphorus supply into the World Ocean, Mt/yr (Compton *et al.*, 2000)

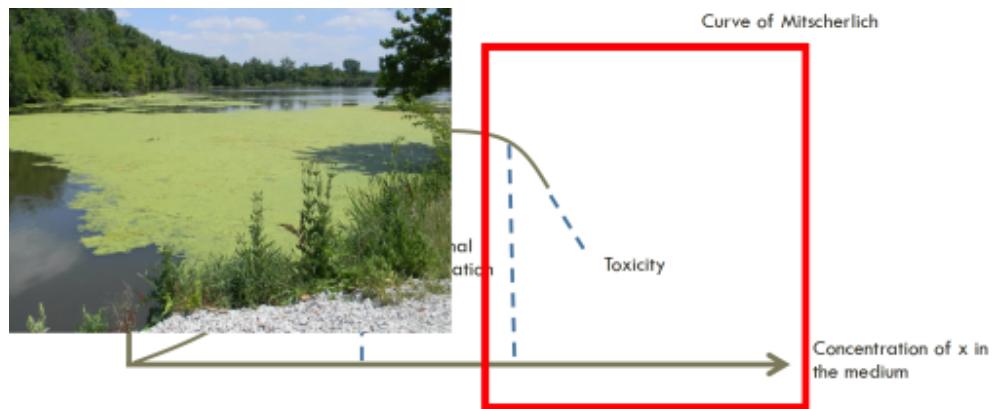

Phosphorus sources and species	Preatthropogenic supply	Present-day supply
1. River runoff		
Dissolved P:		
inorganic	0.3–0.5	0.8–1.4
organic	0.2 (maximum)	0.2 (average)
Suspended P:		
organic	0.9 (maximum)	0.9 (average)
inorganic	1.5–3.0	1.3–7.4
detrital	6.9–12.2	14.5–20.5
2. Eolian	1.0 (including 20% of reactive P)	1.05 (including 20% of reactive P)
Total	10.8–17.8	18.7–31.4
Reactive	3.1–4.8	3.4–10.1

(Baturin, 2003)

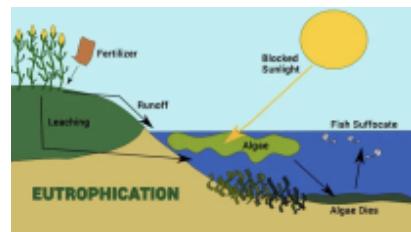

(Gaujous, 1995)

Eutrophication phenomenon

(Pinay, 2018)

Social consequences :

- Crystalization of social tensions
- Agricultural world, local elected officials and environmental protection associations
- Different environment conceptions of public action, social responsibility and scientific knowledge

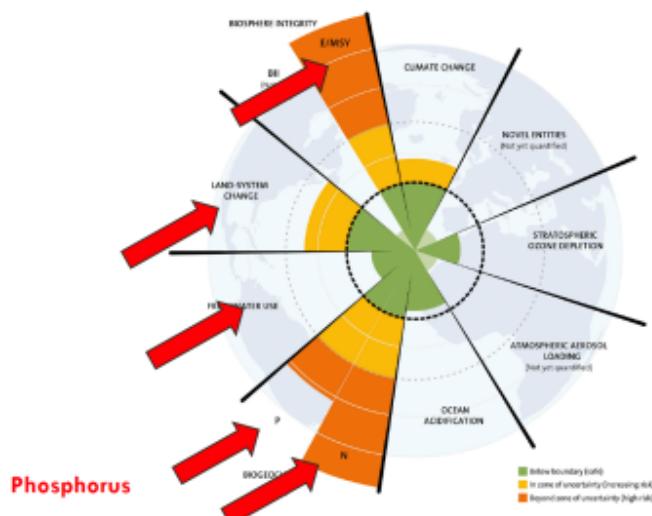

## 3.2. Why is it important ?

**According to you, is this phenomenon really important ?**

**A. I guess, otherwise this course wouldn't exist**

B. It is important but there are bigger issues

C. Not important, it is nothing in front of other issues

(Steffen, 2015)

**Ocean Deoxygenation:**  
Drivers and Consequences  
• Past • Present • Future •

INTERNATIONAL  
CONFERENCE KIEL  
GERMANY  
3 – 7 September 2018

SFB 754

**Kiel Declaration on Ocean Deoxygenation**

Participants of the international conference  
"Ocean Deoxygenation: Drivers and Consequences – Past – Present – Future",  
3 – 7 September 2018 in Kiel, Germany organized by:  
Kiel Collaborative Research Center SFB 754 and Global Ocean Oxygen Network (GO<sub>2</sub>NE – IOC-UNESCO)

# The ocean is losing its breath

Oxygen in the ocean supports the largest ecosystems on the planet. It is alarming that the ocean is losing oxygen, termed ocean deoxygenation, primarily due to global warming by greenhouse gas emissions, and pollution by nutrients and organic wastes particularly in coastal waters. We call on all nations, societal actors, scientists and the United Nations to:

- (a) Raise global awareness about ocean deoxygenation through local, regional and global efforts, including interdisciplinary research, innovative outreach, and ocean education.
- (b) Take immediate and decisive action to limit pollution and in particular excessive nutrient input to the ocean.
- (c) Limit global warming by decisive climate change mitigation actions.

Both the Paris Agreement addressing Climate Change and the United Nations' 2030 Agenda for Sustainable Development demand conservation and sustainable use of the ocean, seas and marine resources in order to safeguard ocean ecosystems and their current and future societal benefits. These are severely threatened by ocean deoxygenation.

### 3.3. Current phosphorus dependency

Rapid food demand to rapid population growth

Rectification of phosphorus deficiency of soils

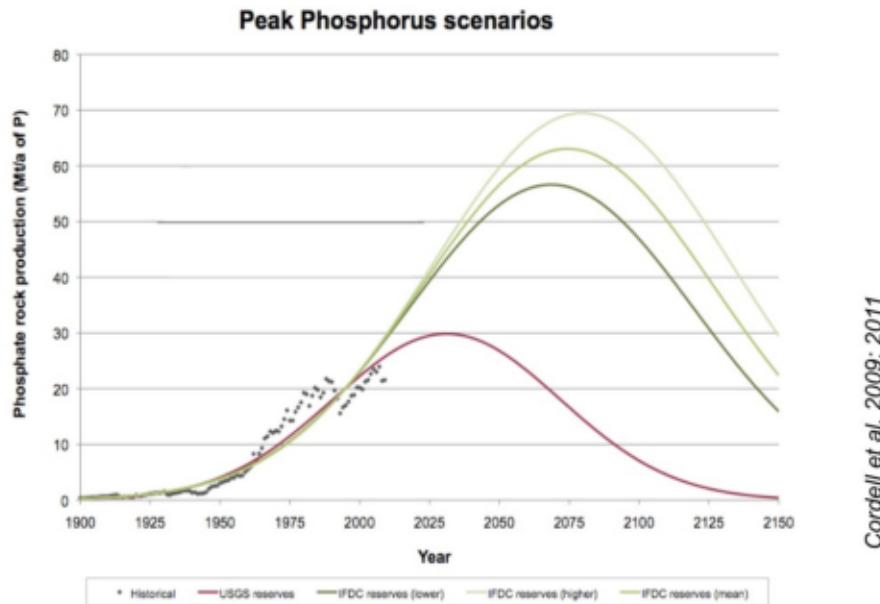

Saving people from starvation

« 90% of global demand for phosphorus is for food production, currently around 148 million tonnes of phosphate rock per year (Smil, 2000a, Smil, 2000b, Gunther, 2005) »

(Cordwell, 2009)

## Phosphorus peak

Cordell et al, 2009; 2011

Figure 1. Peak phosphorus curve, indicating that production will eventually reach a maximum, after which it will decline. Red line indicates the original 2009 analysis based on USGS reserve data (Cordell, Drangert & White, 2009), while the green curves were updated with IFDC 2010 phosphate rock reserve data.

(White, s.d.)

## 3.4. Prospective of phosphorus demand

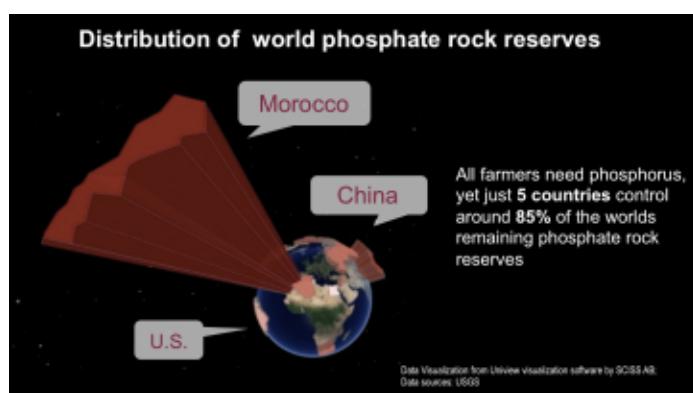

« Following more than half a century of generous application of inorganic high-grade phosphorus and nitrogen fertilizers, agricultural soils in Europe and North America are now said to have surpassed 'critical' phosphorus levels »

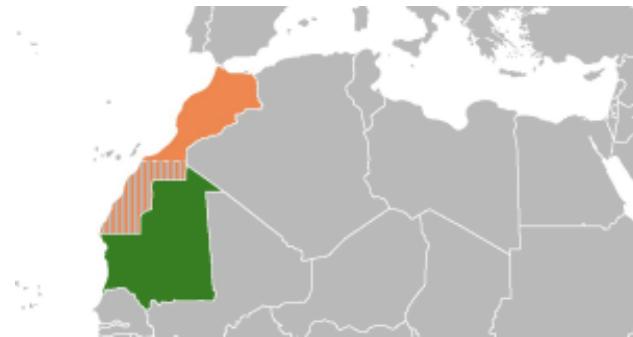

« Consequently, demand for phosphorus in these regions has stabilized or is decreasing. »

« However in developing and emerging economies the situation is different. Global demand for phosphorus is forecast to increase by around by 3–4% annually until 2010/11 »

=> high demand and an approaching peak...

## 3.5. A new war on phosphorus ?

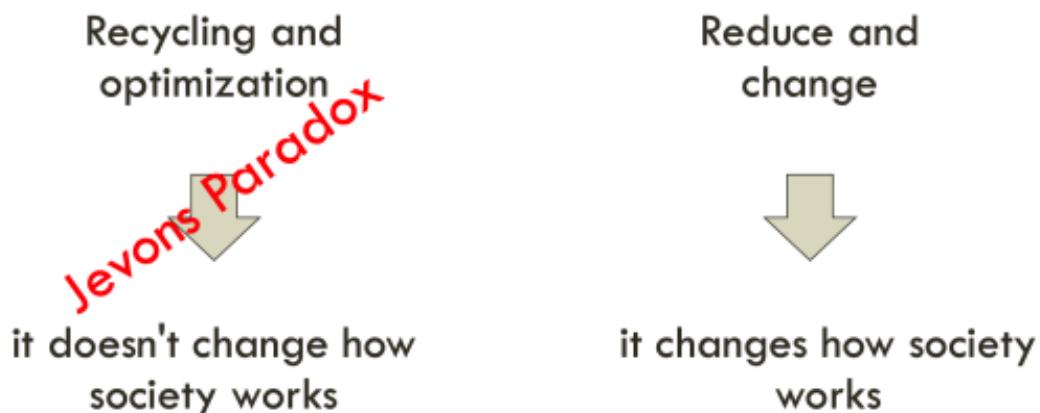

(Wikipedia, s.d.)

### 3.6. How can we ensure the safety of phosphate supplies?

Phosphorus security goals might therefore include:

1. "Increase number of people fed per tonne phosphorus input, or, reduce total phosphorus demand while maintaining food/agricultural output;
2. Reduce dependence on phosphorus imports (to reduce vulnerability to geopolitical dynamics and thereby increasing long-term access to phosphorus);
3. Ensure healthy soils (no phosphorus-deficiency, no phosphorus accumulation, balanced nutrition and presence of organic matter);
4. Ensure farmers needs are met (e.g., maintaining or increasing productivity; ensuring access to phosphorus fertilisers);
5. Reduce losses and wastage where avoidable;
6. Reduce eutrophication and pollution by preventing phosphorus from the food system from entering waterways."
  - 4/5 phosphorus mined for food production never actually reaches the food on our forks
  - Existence of a whole toolbox of phosphorus recycling and efficiency
  - Low tech and high tech phosphorus recovery in the sanitation sector to changing diets

### 3.7. Sustainable management of phosphorus

Possible solutions for the management of phosphate nutrition of tropical crops in the context of ecological intensification :

1. Making better use of the diversity of the plant world and genetic resources
2. Greater use of species assemblages in time and space
3. Make more efficient use of mineral and organic inputs
4. Assessing the potential of microbial inoculants and bio-effectors
5. Maintain and promote the activity of the soil's macrofauna

earthworms = ver de terre

(Hinsinger, 2015)
